

Airmaster BlueLine

odour remover

Airmaster BL 100 removes odour caused by damp, mould, smoke, refuse and pets.

Where Airmaster is used

Airmaster BlueLine BL 100 is a small portable odour eliminator, for odourremoval in basements, camps, toilets and wasterooms. Smoke/odourremoval in cars, ships, caravans, hotelrooms and appartments.

Airmaster BL 100 works with only 12 V and can be used where you do not have 230 Volt

How Airmaster works

Airmaster odour eliminaters produce ozone, a special form of oxygen which is sometimes called activated oxygen(O3). Ozone is a powerful oxidising agent which acts on organic matter including odours, airborne microbes and moulds, to neutralise smells and help reduce airborne pathogens. The end products of oxidisation are mainly carbon dioxide and water.

The ceramic is a consumable aspect of the Airmaster unit and is not covered by the warranty.
We recommend it to be changed once a year.

Airmaster BL 100

- Small handy, portable unit.
- Highly efficient ozoneproduction
- Stainless steel cabinet
- Can be wall-mounted
- Low energy consumption (8 Watt)
- Made in Sweden

Dealer

Technical data	Airmaster BL 100
Ozone production	100 mg / hour
Fan capacity	40 m ³ / hour
Basic	Ceramic cell
L x W x H	196 x 113 x 85 mm
Weight	790 g
Performace	Stainless steel cabinet
Power	7 W / 12 V DC
100 – 240V adapter is included	
BlueLine works in ambient temperatures of +1° – +35° C	
Higher temperatures will reduce the ozone production
