

Airmaster® BlueLine Digital Odor remover made in Sweden

Airmaster BLC 500-D Removes odor caused by damp, mold, smoke, refuse and pets.

Where Airmaster is used

Airmaster can be used as a portable unit, for smoke and odor removal in apartments, kitchen, hotel rooms, toilets and cars.

Wall mounted Airmaster can be used in waste rooms, in ventilation, air-condition and for water purification.

How Airmaster ozone generator works

Airmaster odor eliminators produce ozone, a special form of oxygen which is sometimes called activated oxygen. Ozone is a powerful oxidizing agent which acts on organic matter including odors, airborne microbes and molds, to neutralize smells and help reduce airborne pathogens. The end products of the oxidation are mainly carbon dioxide and water which means that Airmaster is environmentally friendly.

Digital operation with timer

Through the digital display Airmaster can easily be operated. The amount of ozone can be regulated between 0 – 100%.

Three different timer settings:

24 hour timer - interval timer - on/off timer

Extras

Fitting and silicon hose for connection to ventilation and water purification, and to bring the ozone to other areas, e.g. treatment of cars and waste rooms.

Technical data	Airmaster BLC 500-D
Ozone production	0-500 mg / hour
Fan capacity	116 m ³ / hour
Basic	Ceramic tube
Timer	24 hour-, interval- and on/off--timer
Hose fitting	Yes
L x W x H	270 x 180 x 160
Weight	2,1 kg
Consumption	20 W / 100-230 V
Chassis	Stainless steel, blue
Extras	Fitting, silicon hose
Airmaster works in ambient temperatures +1° - +35° C	
Please note! Ozone generators should be used carefully and avoid extended operation in places accommodating human beings. Short term exposition is harmless.
